EXPERIENCE

SOFTWARE DEVELOPER APPRENTICE

Learners Guild Feb 2017 - Feb 2018

Build full-stack Javascript web applications while pair-programming and working in conjunction with senior engineers using an Agile/Scrum methodology.

PROJECTS

Roam

A travel website providing traveler reviews of restaurants, hotels and fun activities.

- Built robust RESTful API that runs on an Express server.
- Implemented authentication and session and used a Postgres database to store the session data.
- Enforced MVC principles.

Reached

A platform that uses Twilio and allows organizations to engage with a mass amount of followers via SMS messages.

- Built and architected the core API that makes use of Twilio's console functions and npm library.
- Implemented OAuth.
- Enforced good Git workflow principles while working in team asynchronously on distinct features.

ReactTube

A Youtube clone built in ReactJS.

- Built fast client-side rendering app that automatically re-renders new content with every keystroke.
- Implemented YouTube API endpoints that allow users to search for and have full interaction with videos.
- Enforced solid build configuration standards using Webpack and Babel.
